(54) Title: A LOCKING ARRANGEMENT OF A PORTABLE ARTICLE SUCH AS COMPUTER PROCESSOR CASING TO A WORK SURFACE

(57) **Abstract:** A locking arrangement for locking a portable article (16) such as miniature computer processor having a planar flat bottom surface to a stationary object such as table surface (10). At least a pair of first protrusions (22a-22d) are provided, each forming an undercut with respect to the bottom surface of the portable article (16), and an opening (24). A bar shaped locking substrate member (26) is provided comprising a bottom surface adapted to be placed on and fastened to the stationary object (10), and a top surface with at-least a pair of complementary undercut portions (32a-32d) configured to frictionally match the first protrusions (22a-22d) when the article is positioned overlapping the substrate member (26). Further provided is a key-operable rotatable lock member (36) carrying a projection (40) which is adapted to become inserted into the opening (24) in the overlapping position to thereby arrest the portable article (16) against the substrate member (10).
